

Project 2

Due Date: 6/27/2017 @ 10:00AM

The goal of this project is to improve student understanding of the multithreading. Write a program with multithreading to implement.

- (1) Two balls are moving from top to bottom of a window at different speeds with different colors.
- (2) When the balls reach the bottom of the window, they bounce back and continue moving.
- (3) When the balls meet, the two balls exchange their colors.

Java or C# all can be used to implement the program.
